

In and Around the former lead mining village of Rookhope

Flued to its chimney up the hill,
That smokes no answer any more
But points, a landmark on Bolt's Law
The finger of all questions. There in
ROOKHOPE I was aware....
New Year Letter (1941) W.H. Auden

curlew

Areas of old heather are burnt so
new young shoots will grow.
The mosaic of young and old
heather, grass and bracken provide
food and shelter for red grouse

common lizard

Stone walls provide shelter
and warm bedding spots
for lizards and homes
for stoats and weasels.

Redburn Common is
mostly mat grass which
makes the hillside
look white.

Look on rocks and under
the heather for different
types of lichen.

In summer the grass is
sprinkled with yellow
flowered tormentil and
white heath bedstraw used
for sheep pasture.
Look for red grouse, curlew
and short-eared owls.

Fields used as pasture
for sheep and cattle. Some are
cut once a year for hay and silage.
They support upland wading
birds in the spring, such as lapwing and
redshank. Also look out for grey partridge,
thrushes, ring ouzels, kestrels and in the
winter fieldfares.

The river bank here is being managed
to protect water voles and encourage
otters. Willows reduce bank erosion.
Birds include heron, moorhen, dippers,
wagtails and oystercatchers, plus
summer visitors such as warblers
and sand martins.

In earlier years, Lintzgarth Common was
drained to improve grazing. Now part is
being actively managed for wading birds.
Ditches are being blocked and new shallow
pools created to restore the wet upland
pasture. Note the big tussocks of grass and
rushes. Black grouse use this area, but they
also need woodland for shelter and winter
feed, so small areas in the cleughs (small
valleys) are being planted with native
trees such as rowan, birch and alder.

A NETWORK OF WALKS OFF THE WEARDALE WAY

Short route: 3 miles/5km moderate
Long route: 5 miles/8km strenuous

Starting from the former leadmining village of Rookhope in Weardale

Walking Information

The routes take you onto open moorland, you are strongly advised to:

- tell someone where you are going and your expected time of return
- carry an OS map and use in conjunction with this leaflet
- wear appropriate clothing and footwear (the longer route covers very uneven ground and crosses boggy land)
- respect the local wetlands nature reserve and grouse moorland by keeping dogs on a short lead. This is especially important from 1st March - 31st July as this is the nesting and lambing season.

Reproduced from Ordnance Survey mapping. Durham County Council (License No. 100019779) 2005.

Open Access

The walk in this leaflet follows public rights of ways however as from 28 May 2005, under the new right of access, many hectares of Rookhope's surrounding moorland became available for people to walk on (shown on the Ordnance Survey Explorer 307 map, published 2005). Management of ground nesting birds plays a big part in conserving this important and unique habitat therefore, at times, some open access areas will be subject to 'restrictions'. For more information about Open Access visit: www.countrysideaccess.gov.uk

This walk lies within the North Pennines Area of Outstanding Natural Beauty www.northpennines.org.uk

Amenities

Village Hall car park
Post Office/shop
You are welcome to use the toilets in the Rookhope Inn
The Dales Centre, Stanhope

Farming and Wildlife

otter

Use the map on your walk and you will once again get a glimpse into the lost industry of Rookhope, known to past mining generations as 'Towd Man' at the seams. If you would like to find out more about the lead mining industry and its legacy why not visit The North of England Lead Mining Museum at Killhope, www.durham.gov.uk/killhope, Tel: 01388 537505

Rookhope village lies in a North Pennine valley 320m above sea level. The highest point on this walk is nearly 500m. Farming has always been difficult due to the altitude and poor soils and is now limited to sheep and beef cattle. 'Traditional' farming methods such as late mowing for hay and lighter grazing result in an improved range of plants providing a good habitat for wading birds and small mammals. Some areas have been purchased privately and are now managed to improve their wildlife value. Small areas of native trees are being planted to increase biodiversity. In places the banks of the Rookhope Burn are being managed to protect water voles and encourage otters.

As you walk, look down in the valley bottom and across to the other side and you will clearly see how different management affects the landscape.

History and Industry

Look at it now and Rookhope is what you would expect it to be, a small hill farming community. So why such a large village? Why so many small houses up the valley sides? Why a vicarage that would do justice to a rich market town? The answer is in mining. Not long after the Normans invaded, the Scots also invaded but they only conquered a small part of the wild and largely uninhabited North of England. Hardly worth the bother you might think until you realise it contained Carlisle mint and many of the royal silver mining areas of the North Pennines. It did not, however, contain the Rookhope valley which the new and immensely powerful Bishop of Durham now held for the king. He wanted a mighty cathedral and for this he needed a lot of money. To get it he pushed men to mine for all the silver/lead they could find, the lead for the buildings and the silver to go to his mints for coinage. Some of them in turn moved from summer camps to living year round in the valleys and gradually the mining workforce of Rookhope was born.

The above information has been gathered from a North Pennines Heritage Trust Publication called 'W H Auden, Pennine Poet' by Alan Myers and Robert Forsthe. Copies are available from The Dales Centre, Stanhope, Tel: (01388) 527650.

curlew

The shafts are filled with water, the mosses grope over the washing floor. I look through the broken arms of waterwheels: Trucks lie overturned; I see lambs feeding. an old rail patches a gap in the wall. Rain falls through the gaping roof of sheds.

He often describes the juxtaposition of industrial and natural landscapes. One of his early drafts of The Chase (1934) includes the following lines:

Tramlines and slagheaps, pieces of machinery, That was, and still is, my ideal scenery.

W H Auden was born in York in 1907. He visited Rookhope in his early childhood days and the moorland of the North Pennines provided Auden with inspiration for some of his earliest works. In 'Letter to Lord Byron' (1973) he writes:
